

# Tropical Weather Report

Where are you reporting from?	What is the highest temperature today?	What is the lowest temperature today?
What is the weather like today?	What is the wind speed and direction today?	Is today's weather normal for this time of year?
How does the weather compare to yesterday?	What is the weather expected to be like next week?	How does the weather compare to tomorrow?

Where is your city located? Mark it on this world map so you know where to point when you give your forecast.

Now you're ready to prepare your forecast.

Think about:

- Who will introduce the forecast
- What facts you will share with the class
- Who will read each section
- Where you will need to point to on the map
- How you will sum up your forecast
